

### RSIC-FS

The RSIC-Flat Screen Isolation system decouples the TV from the wall and from vibrations. The New flat TV's create roughly the same amount of noise out the back of the television as the front resulting in unhappy neighbors. Even though the speakers are small and seem too weak to cause any trouble, the proximity to the wall gives the small speakers much more power than most walls can acoustically stop. The RSIC-FS system decouples and reflects the noise back into the intended room reducing the noise in the adjacent space.
